

## **Start of construction of the Center for Life Science and Plasma Technology**

**After several years of intensive planning, the construction of the "Center for Life Science and Plasma Technology" with a usable area of around 5,500 m<sup>2</sup> is now beginning in Greifswald. This will create the space required for the further expansion of the laboratory and production capacities of the resident Enzymicals AG directly on the inner courtyard of the BioTechnikum.**

In particular, the availability of designated areas for the production and storage of chemical products lays the foundation for further growth. This will further expand the company's strategic orientation towards industrial process development with the possibility of producing fine chemicals on the multi-kilogram scale. Dr. Ulf Menyes (CEO of Enzymicals AG) was closely involved in the planning activities and commented: "We are glad that we can continue to grow the company and expand our research and production capacity at the Greifswald site and are looking forward to its realization of the center after a long planning phase. By being able to work with the city in planning, our future needs can be taken into account. ". According to the current status of the construction schedule, it is expected that the center will be completed and commissioned in the second quarter of 2022.
